

HTML Overview

ABOUT HTML 5

World Wide Web
Consortium (W3C)

Hypertext Markup Language was introduced in 1990.

HTML 5 was recommended as a standard by W3C in 1997.

HTML 5 is the next version and will be the new standard.

Majority of the browsers support HTML 5 element and Application Programming Interface (API).

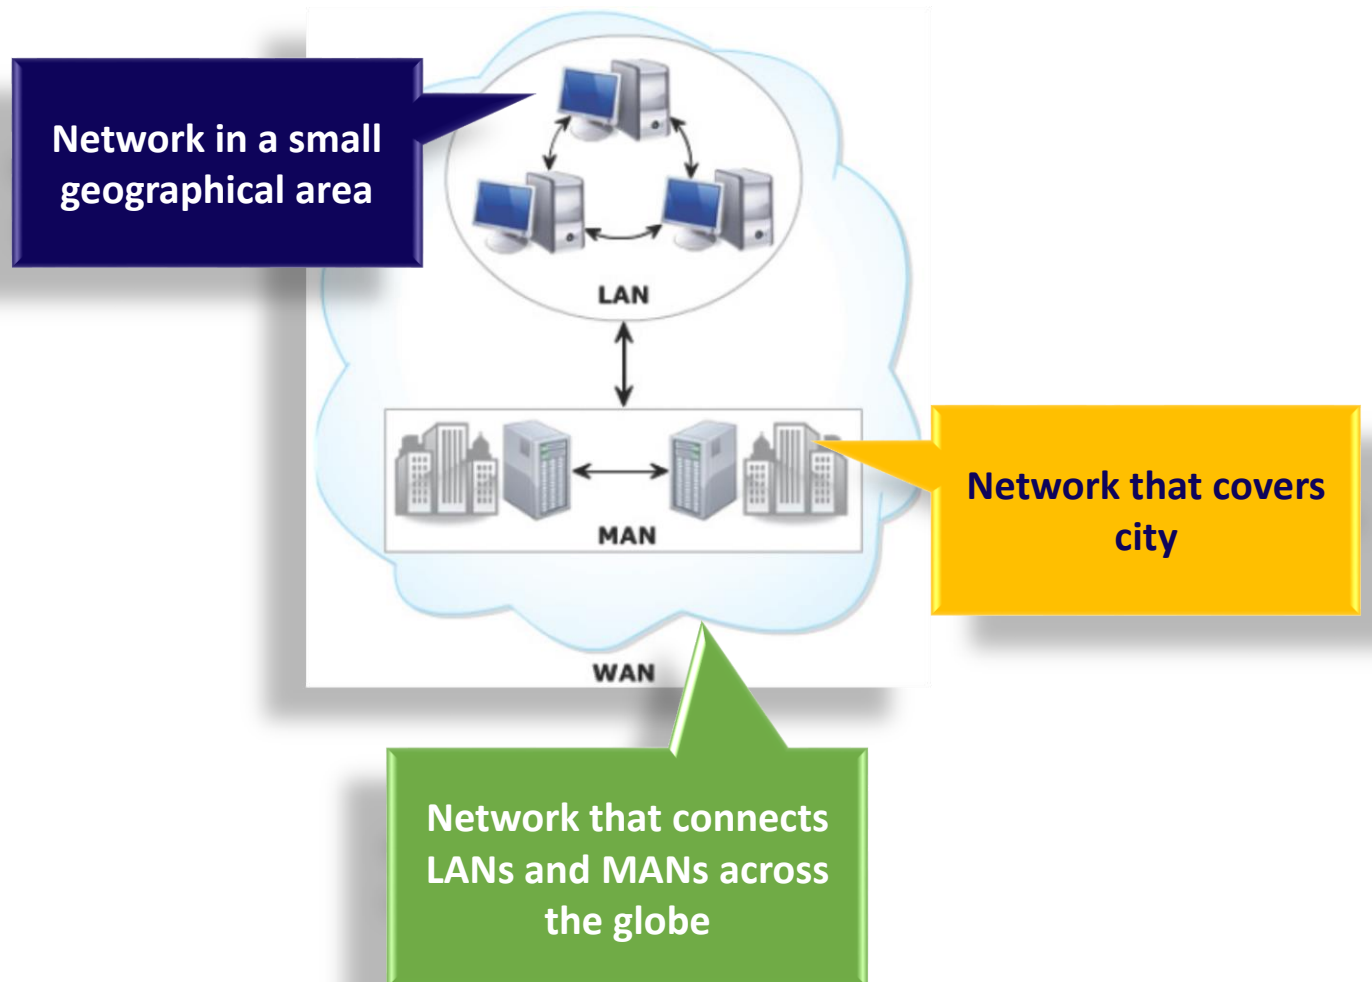

React /
Java /
Python

API

Database
Queries

TYPES OF NETWORKS

- ❖ Local Area Network (LAN)
- ❖ Metropolitan Area Network (MAN)
- ❖ Wide Area Network (WAN)

WHAT IS INTERNET ?

- Internet is network of networks
- Internet is known as the largest WAN.
- WAN raised the need to share data across the globe rather than within an organization.
- This resulted in the evolution of Web also known as World Wide Web (WWW).

WEB COMMUNICATION

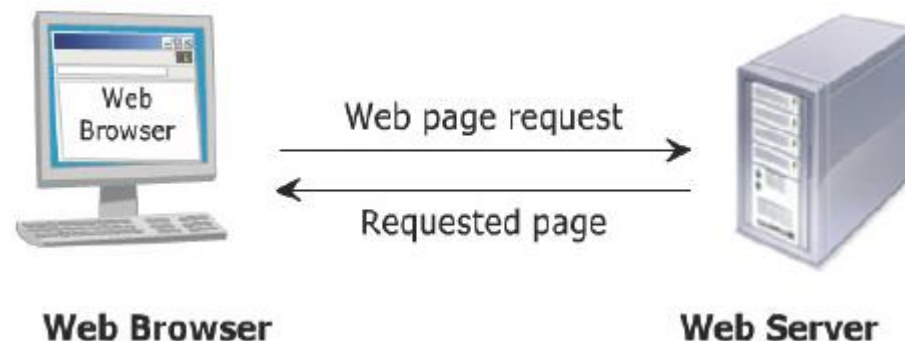

URL :
<https://www.google.com>

❖ Steps to view a Web page in a browser are as follows:

1. User specifies the Uniform Resource Locator (URL) of Web page in a browser.

2. The client browser sends the URL request to the appropriate Web server.

3. Web server processes the request and sends the Web page as a response to the browser.

WHY WEB DESIGNING IS IMPORTANT?

1. It sets the first impression
2. It aids your search engine optimization (SEO) strategy
3. It sets the impression for customer service
4. It builds trust with your audience
5. Your competitors are doing it

Your website should be designed keeping in mind your audience and should ensure that it improves user experience.

Brand image Colour Layout Fonts and typography Website accessibility Site navigation

What is Website?

A collection of web pages which are grouped together and usually connected together in various ways. Often called a "web site" or a "site."
